

PALM CHEMICALS

The palm chemicals industry is an ever developing industry. They are used in food and personal care products industry and is recently being used as biodiesel feedstock. Tradeasia International is one of the most trusted partners for palm chemical trading in Asia.

There are three categories of palm chemicals: Crude palm oil, Palm kernel oil and Soap noodles. The detailed information and application for each of these products can be obtained from our website:

<http://palm-chemicals.com>

CRUDE PALM OIL

Crude palm oil is obtained from the outer flesh of the palm fruit called the mesocarp. It is used as cooking oil and is widely used in the food industry. Our company has a range of products under the palm oil category.

The chemicals under this category is suited for both food and non-food applications. Refined, Bleached and Deodorized (RBD) palm oil is widely used as cooking oil. Quality is ensured in all our products.

PALM KERNEL OIL

Palm Kernel Oil is obtained from the fruit kernel/seed. The kernel seeds obtained after the milling process are crushed and refined. Both crude oil and refined oil can be acquired through our company. Palm kernels find applications in food industry, soap manufacturing etc. Palm kernel expeller is the residue obtained from crushing the palm kernels and it is used as animal feed. Other available products include palm kernel olein, Palm kernel stearin etc.

SOAP NOODLES

Soap noodles is the third type of chemical obtained from the palm. These are obtained from blending palm oil and palm kernel oil. They are mainly used in soap manufacturing.
